AAY28653

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                The present protein sequence is that of the cytoplasmic, Lymphoid protein Tyrosine Phosphatase, Lyp2 protein that has a single catalytic formain. The non-catalytic portion of the phosphatese contains unique sequences, including a single protein to the phosphatese contains unique in the catalytic parts sequence rich in Pro, Glu or Asp, Ser and Thr. It is expressed significantly in fetal liver and in resting lymphoid cells. Lyp2 is an isoform of the Lyp1 gene that arises by alternative splicing of the mRNA. The intronic sequence of Lyp1 encodes for the C-terminal 7 aminoacids and part of the 3 untranslated region of Lyp2. Lyp2 shares sequence identity with the murine phosphatase Z70PEP. Lyp proteins are important for regulation of T cell antigen and cytokine receptor signalling and for early and late stages of T cell afferentiation. Lyp2 has immunosuppressive activity. Compounds that increase expression of Lyp protein can be used as immunosuppressive agents to reduce or prevent T cell activation or proliferation, to control thymocyte differentiation, to treat autoimmune diseases and

The present protein sequence is that of the cytoplasmic, Lymphoid Protein Tyrosine Phosphatase Lypl, that has a single catalytic domain. The non-catalytic portion of the phosphatase contains unique sequences, including a single PEST sequence rich in Pro, Glu or Asp, Ser and Thr. Lypl is expressed in the lymphoid cells, particularly in thymocytes, mature B and T cells and expression is increased upon activation. It is involved in lymphocyte growth and development and is phosphorylated in a cell cycle dependent manner. Lypl shares about 70% phosphorylated in a cell cycle dependent manner. Lypl shares about 70% sequence identity with the murine phosphatase Z70PEP. Lyp proteins are important for regulation of T cell antigen and cytokine receptor signalling and for early and late stages of T cell differentiation. Lypl has immunosuppressive activity. Compounds that increase expression of the protein can be used as immunosuppressive agents to reduce or prevent T cell activation or proliferation, to control thymocyte differentiation can denote the control thymocyte of the control manner of the control manner situations.
                                                                                                                                   New nucleic acid encoding intracellular tyrosine phosphatase and related proteins, used to modulate signalling through T cells, particularly as immunosuppressant

New nucleic acid encoding specific protein tyrosine phosphatases useful for identifying specific modulators for treatment and prevention of cancer and neurodegenerative disease

Claim 2; Page 151-153; 193pp; English.

The present invention describes isolated, enriched or purified nucleic acids encoding PTP04, SAD, PTP05, PTP10, ALP and ALK-7 proteins. The present sequence represents human PTP04. The above proteins. The present sequence represents human PTP04. The above proteins. The present sequence represents human PTP04. The above proteins, other than 12.0 min tyros in in vitro. These substances are used to identify substances that modulate their activity (i.e. agonists and antagonists, including MBP) in vitro. These substances are used to treat or prevent diseases associated with abnormal signal transduction pathways that involve the proteins, particularly cancer (e.g. leukaemia and Imphoma), while modulators of ALK-7 (which is a type I receptor particularly for treating Alzheimer's, Parkinson's or Huntington's diseases. Nucleic acid fragments of the polynuclectides encoding the protein can be used as probes to identify and clone related sequences; to detect protein-encoded RNN; to generate transgenic animals and in the content protein can be used to promote transgenic animals and in the content protein can be used to protein can be used to generate transgenic animals and in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present protein sequence is that of the murine phosphatase, 270PEP that has a single catalytic domain. The non-catalytic portion of the phosphatase contains unique sequences, including five PEST sequences rich in Pro, Glu or Asp, Ser and Thr. 270PEP shares about 70% sequence important for regulation of T cell antigen and cytokine receptor signalling and for early and late stages of T cell differentiation. 270PEP has immunosuppressive activity. Compounds that increase expression of Lyp protein can be used as immunosuppressive agents to reduce or prevent T cell activation or proliferation, to control thymocyte differentiation, to treat autoimmune diseases and transplant situations.
                                                                                                                                                                                                                                                            /note= "Catalytic protein tyrosine phosphatase domain"

                                                                            οy
                                                                                                                                                                                                                                                                                                                                                                                  25;
                                                                                                                                                     between a protein tyrosine phosphatase (PTP) and a tyrosine phosphatase phosphorylated polypeptide using fluorescence energy signals. The methods are useful for performing screening assay to identify agents that alter PTP binding to and PTP-mediated catalytic dephosphorylation of phosphotyrosine peptide substrates. The present sequence is not given in the specification but is that of human PTP-PEST protein sequence taken from Genbank (Accession Number; xP034191). The present sequence was used to generate mutants D199A (AAM51201) and C231S (AAM51202) as described in the specification.
                                                                                                                                                                                                                                                                          Note: An alternative sequence for human PTP-PEST is given in figure 1 of the specification (AAG78281).
                                                                                                                                            The invention relates to identifying agents which alter the interaction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     410
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        466
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  462

This is the amino acid sequence of human protein tyrosine phosphatase (PTP) PEST. PTP-PEST is a soluble PTP that is ublquitously expressed throughout embryonic development and in mutine adult tissues. The N-terminal portion of the enzyme encodes for the catalytic domain, while

the C-terminal portion is composed of 5 proline rich domains, and a binding site for the adaptor protein Shc. The pro 2 domain is required for paxillin binding, and the synthesis of mutant PTP-PEST have shown comparation for paxillin binding activity. The comparation relates to a compound that is capable of interfering with the binding of PTP-PEST to signalling molecules that are involved in cell captares to a compound that is capable of interfering with the binding of PTP-PEST to signalling molecules that are involved in cell captares to a method for finding a genuine substrate for an enzyme in a comparation of PTP-PEST (see AAV67251 and AAV67253) is used in this method. The compounds have cytostatic and antiinflammatory activity. The compounds are used for making medicaments for treating a disease related compounds are used for making medicaments for treating a disease related computed and are used for making medicaments for treating a disease related computed in a compute state of the novel method is used for identifying a genuine computed is an enzyme.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Note: The present sequence is not given in the specification but is derived from the wildtype human PTP-PEST sequence (AAMS1205) from Genebank (Accession Number; XPO34191). An alternative sequence for human PTP-PEST is given in figure 1 of the specification (AAG78281).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to identifying agents which alter the interaction between a protein tyrosine phosphatase (PTP) and a tyrosine phosphorylated polypeptide using fluorescence energy signals. The method are useful for performing screening assay to identify agents that alter PTP binding to and PTP-mediated catalytic dephosphorylation of phosphotyrosine peptide substrates. The present sequence is that of a human PTP-PEST D199A mutant.
                                                                                                                                                                                                                                                               PTP; protein tyrosine phosphatase; tyrosine phosphorylated polypeptide; dephosphorylation; phosphotyrosine; human; PTP-PEST; mutein; mutant.

The invention relates to identifying agents which alter the interaction between a protein tyrosine phosphatase (PTP) and a tyrosine phosphorylated polypeptide using fluorescence energy signals. The methods are useful for performing screening assay to identify agents that alter PTP binding to and PTP-mediated catalytic dephosphorylation of phosphotyrosine peptide substrates. The present sequence is that of a human PTP-PEST C231S mutant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Note: The present sequence is not given in the specification but is defined the wildtype human PTP-PEST sequence (AAAB21265) from Genebank (Accession Number; XPO134191). An alternative sequence for human PTP-PEST is given in figure 1 of the specification (AAG78281).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  116

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This is the amino acid sequence of human (C231S) mutant protein tyrosine phosphatase (PTP) PEST. The wild-type cysteine residue at position 231 is replaced with a serine residue. PTP-PEST is a soluble PTP that is ubiquitously expressed throughout embryonic development and in murine adult tissues. The N-terminal portion of the enzyme encodes for the catalytic domain, while the C-terminal portion is composed of 5 proline rich domains, and a binding site for the adaptor protein Shc. The pro 2 domain is required for paxillin binding, and the synthesis of mutant PTP-PEST have shown that proline 362 is important for paxillin binding activity. The invention relates to a compound that is capable of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel therapeutic agents for treating diseases which are related to cell proliferation, migration, inflammation and angiogenesis especially

interfering with the binding of PTP-PEST to signalling molecules that be envolved in cell migration, adhesion or division. The compound can be derived from minimal sequences found in binding sites of PTP-PEST. The invention also relates to a method for finding a genuine substrate for an enzyme in a cell that normally expresses the wild type form of the enzyme. A mutent version of PTP-PEST (represented by this sequence) is used in this method. The compounds have cytostatic and antinflammatory activity. The compounds are used for making medicaments for treating a disease related with cell proliferation, migration, inflammation and angiogenesis, especially cancer. The novel method is used for identifying a genuine substrate for an enzyme. Note: The present sequence is not shown in the specification but it has been derived from the PTP-PEST sequence (see AAV67252) shown in figure
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ICAIVDYTWMLLKDGIIPENFSVFSLIREMRTQRPSLVQTQEQYELVYNAVLELFKRQMD 296

PTP-PEST is a soluble PTP that is ubiquitously expressed throughout embryonic development and in murine adult tissues. The N-terminal portion of the enzyme encodes for the catalytic domain, while the C-terminal portion is composed of 5 proline rich domains, and a for paxillin binding, and the synthesis of mutant PTP-PEST have shown that proline 362 is important for paxillin binding activity. The invention relates to a compound that is capable of interfering with the binding of PTP-PEST to signalling molecules that are involved in cell mlgration, adhesion or division. The compound can be derived from minimal sequences found in binding sites of PTP-PEST. The invention also relates to a method for finding a genuine substrate for an enzyme in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel therapeutic agents for treating diseases which are related to cell proliferation, migration, inflammation and angiogenesis especially cancer -

cell that normally expresses the wild type form of the enzyme. A mutant version of PTP-PBST (see AAY67251 and AAY67251) is used in this method. The compounds have cytostatic and antiinflammatory activity. The compounds are used for making medicaments for treating a disease related with cell proliferation, migration, inflammation and angiogenesis, especially cancer. The novel method is used for identifying a genuine substrate for an enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            379
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          612

```

Charest A;

This is the amino acid sequence of mouse (C231S) mutant protein tyrosine phosphatase (PTP) PEST. The wild-type cysteine residue at position 231 is replaced with a serine residue. PTP-PEST is a soluble PTP that is ubiquitously expressed throughout embryonic development and in murine adult tissues. The N-terminal portion of the enzyme encodes for the catalytic domain, while the C-terminal portion is composed of 5 proline. In the Omeans, and a binding site for the adaptor protein Shc. The pro 2 domain is required for paxillin binding, and the synthesis of mutant PTP-PEST have shown that proline 362 is important for paxillin binding artifutly. The invention relates to a compound that is capable of a critisty. The invention relates to a compound that is capable of are involved in cell migration, adhesion or division. The compound can be derived from minimal sequences found in binding sites of PTP-PEST. The invention also relates to a method for finding a genuine substrate for an enzyme in a cell that normally expresses the wild type form of the enzyme. A mutant version of PTP-PEST (represented by this sequence) is used in this method. The compounds have cytostatic and antiinflammatory activity. The compounds are used for making medicaments for treating a disease related with cell proliferation, migration, inflammation and angiogenesis, especially cancer. The novel method is used for identifying a genuine substrate for an enzyme. Note: The present sequence is not shown in the specification but it has been derived from the PTP-PEST sequence (see AAY67250) shown in figure

between a protein tyrosine phosphatase (PFP) and a tyrosine phosphatase phosphorylated polypeptide using fluorescence energy signals. The methods are useful for performing screening assay to identify agents that alter PTP binding to and PTP-mediated catalytic dephosphorylation of phosphotyrosine peptide substrates. The present sequence is that of a catalytic domain of a PTP for comparison with human PTPIB (AAG78262).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to identifying agents which alter the interaction

                                                                                                                                                                                                                                                                                                                                                                                          Sequences AAF21614 - AAF22031 represent DNA sequences encoding human proteins AAB58711 - AAB59128. The DNA and protein sequences are proteins AAB58711 - AAB59128. The DNA and protein sequences are associated with breast and ovarian cancer. Included in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the sequences AAF22032 - AAF22040 and AAB59129 which are used in the sequences and ovarian cancer associated DNA, protein, agonist or antagonist sequences exhibit cytostatic; immunosuppressive; nootropic, neuroprotective; antiviral; antivinal; and cardiant activity. The polynucleotide and protein sequences are used in the diagnosis, articularly breast and ovarian cancer. The nucleic acid sequences, proteins, agonists and agonists may also be used in the diagnosis, correction and treatment of immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, arthritis and ulcerative colitis; cardiovascular disorders such as mycardial ischaemias; wound healing; neurological diseases such as mycardial anoxia and epilepsy; and infectious diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                 New human breast and ovarian cancer associated gene sequences and the polypeptides encoded by these genes, useful in the prevention, treatment and diagnosis of cancer, immune disorders, cardiovascular disorders and neurological diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               597

                                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides substrate trapping mutant protein tyrosine phosphatases (PTPs). They can be used to reduce the activity of tyrosine phosphorylated proteins and to screen for modulators capable of altering the binding of protein tyrosine phosphatases to their substrate. These may be used in disease diagnosis and treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     104 GPLSTTLLDFWRMIWEYSVLIIVMACMEYEMGKKKCERYWAEPGEMQLEFGPFSVSCEAE 163
